Isolation separates sick people with a contagious disease from people who are not sick. If you have tested positive for COVID-19, you should isolate.

Quarantine separates and restricts the movement of people who have been exposed to a contagious disease and/or while individuals are awaiting test results. If you have sustained close personal contact with someone who has tested positive confirmed by the health department or EHS, you should follow quarantine guidelines.

We can all reduce the spread of COVID-19 by wearing a face covering, keeping 6 feet distance, avoiding gatherings and washing hands frequently.
