COVID-19 SCENARIOS FOR STUDENTS LIVING IN OFF-CAMPUS HOUSING

Students may shift columns based on scenario developments.

I have SYMPTOMS OF COVID-19.

You should isolate and get tested at University Health Service (UHS).

Follow guidance of UHS. Follow these guidelines to isolate in your living environment while awaiting test results.

Follow CDC guidance on how to protect others in your living environment.

I have a POSITIVE COVID-19 TEST RESULT (within the last 5 days)**.

You should isolate.

Follow guidance of your health care provider and case investigator.

If your test result is not from UHS or U-M, report your positive result here.

Follow these guidelines to isolate in your living environment.

Follow CDC guidance on how to protect others in your living environment.

I am a CONFIRMED CLOSE CONTACT* of someone who has COVID-19.

Self-monitor for symptoms for 10 days.

Wear a mask in situations with higher risk of exposing vulnerable individuals.

If your exposure was from a contact in your living environment:

• Wear a mask when around others for 10 days following your exposure.
• Get tested at UHS 3-7 days after exposure, or immediately if symptoms develop.

You may continue to attend work and class.

If symptoms develop, get tested at UHS. If positive, isolate and follow guidance.

I am worried I have been exposed to someone who has COVID-19.

Review this definition to see if you are a close contact.

If no, no further action is required for now.

Check out self-help tools from CAPS.

If yes, or you develop symptoms, get tested at UHS.

Who to contact for:

Medical advice: University Health Service at 734-764-8320.

General student support/resources: Dean of Students Office at 734-764-7420 or deanofstudents@umich.edu.

Students who can do so safely may choose to return to their permanent residence to isolate instead of on campus/Ann Arbor.

*within 6 feet of a case for a total of 15 minutes or more in 24-hour period as determined by a public health official.

**For those who are severely ill with COVID-19 infection or those who are severely immunocompromised, an extended duration of isolation may be recommended.
